#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 112

- 1. The following is a quotation of the second paragraph of 35 U.S.C. 112:
  - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 2. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "responsive to receiving" in lines 3 and 8. This is confusing. What is responsive to receiving, Clarify.

## Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Re claim 1-20, claim 1-20 claims a data structure, however, it appears the limitations of said claim are merely claiming statements defining various items, therefore said limitations do not appear to be defining any functional interrelations which permits the computer program's functionality (or data structure's functionality) to be realized.

In view of the above, claims 1-20 are therefore directed to non-statutory subject matter.

Art Unit: 2174

# Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 6. Claims 1-21 are rejected under 35 U.S.C. 102(e) as being anticipated by Sylor et al. (20020186238).

Re claim 1, Sylor et al. discloses a method in a data processing system for managing display of a new document, the method comprising:

responsive to receiving a user input indicating that the new document is to be displayed, displaying a list of browser windows including an indication of a presently displayed document in each respective browser window in the list of browser windows (see paragraph 0152 and 0177, title bar for example); and

responsive to a user selection of a browser window from the list of browser windows, replacing a document displayed in the browser window with the new document (see paragraph 0177 and figure 6B for example).

Re claim 2, Sylor et al. discloses a method further comprising: promoting the browser window to a top of a window hierarchy (see paragraph 0177 and 0152 for example).

**Art Unit: 2174** 

Re claim 3, Sylor et al. discloses a method, wherein the indication is a document name from a title bar (see paragraph 0101 for example).

Re claim 4, Sylor et al. discloses a method, wherein the indication is a thumbnail of the document (see paragraph 0102 for example).

Re claim 5, Sylor et al. discloses a method, wherein the list of browser windows is displayed in a pop-up menu (see paragraph 0152, 0177 and figure 6b for example).

Re claim 6, Sylor et al. discloses a method, wherein the receiving step and the replacing step are performed by a Web browser (see paragraph 0152, 0177 and figure 6b for example).

Re claim 7, Sylor et al. discloses a method, wherein the new document is selected from one of a Web page, an image, or a spreadsheet(see paragraph 0152, 0177 and figure 6b for example).

Re claim 8, Sylor et al. discloses a method, wherein the user input is received in a currently active browser window(see paragraph 0152, 0177 and figure 6b for example).

Re claim 9, Sylor et al. discloses a data processing system for managing display of a new document, the data processing system comprising:

displaying means, responsive to receiving a user input indicating that the new document is to be displayed, for displaying a list of browser windows including an indication of a presently displayed document in each respective browser window in the list of browser windows; and

replacing means, responsive to a user selection of a browser window from the list of browser windows, for replacing a document displayed in the browser window with the new document(see paragraph 0152, 0177 and figure 6b for example).

Re claim 10, Sylor et al. discloses a data processing system further comprising: promoting means for promoting the browser window to a top of a window hierarchy(see paragraph 0152, 0177 and figure 6b for example).

Re claim 11, Sylor et al. discloses a data processing system, wherein the indication is a document name from a title bar(see paragraph 0152, 0177 and figure 6b for example).

Re claim 12, Sylor et al. discloses a data processing system, wherein the indication is a thumbnail of the document(see paragraph 0152, 0177 and figure 6b for example).

Re claim 13, Sylor et al. discloses a data processing system, wherein the list of browser windows is displayed in a pop-up menu(see paragraph 0152, 0177 and figure 6b for example).

Re claim 14, Sylor et al. discloses a data processing system, wherein the receiving means and the replacing means are performed by a Web browser(see paragraph 0152, 0177 and figure 6b for example).

Re claim 15, Sylor et al. discloses a computer program product in a computer readable medium for managing display of a new document, the computer program product comprising:

Art Unit: 2174

first instructions, responsive to receiving a user input indicating that the new document is to be displayed, for displaying a list of browser windows including an indication of a presently displayed document in each respective browser window in the list of browser windows(see figure 6b with 519 for example); and

second instructions, responsive to a user selection of a browser window from the list of browser windows, for replacing a document displayed in the browser window with the new document(see figure 6b with 518 for example).

Re claim 16, Sylor et al. discloses a computer program product further comprising: third instructions for promoting the browser window to a top of a window hierarchy(see paragraph 0152, 0177 for example).

Re claim 17, Sylor et al. discloses a computer program product, wherein the indication is a document name from a title bar(see paragraph 0101 for example).

Re claim 18, Sylor et al. discloses a computer program product, wherein the indication is a thumbnail of the document(see paragraph 0102 for example).

Re claim 19, Sylor et al. discloses a computer program product, wherein the list of browser windows is displayed in a pop-up menu(see paragraph 0152, 0177 and figure 6b for example).

Re claim 20, Sylor et al. discloses a computer program product, wherein the first instructions and the second instructions are performed by a Web browser (see paragraph 0152, 0177 for example).

Re claim 21, Sylor et al. discloses a data processing system comprising: a bus system (with 635 for example);

Art Unit: 2174

a memory (with 634 for example) connected to the bus system, wherein the memory includes a set of instructions; and

a processing unit connected to the bus system, wherein the processing unit executes the set of instructions to receive a user input indicating that a new document is to be displayed, wherein a list of browser windows is displayed including an indication of a presently displayed document in each respective browser window in the list of browser windows; and replace a document displayed in the browser window with the new document in response to a user selection of a browser window from the list of browser windows(see paragraph 0152, 0177 and figure 6b for example).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jinhee J. Lee whose telephone number is 571-272-1977. The examiner can normally be reached on M- F at 8:30AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kristine Kincaid can be reached on 571-272-2100 ext. 74. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
